

HEALTHY LIFESTYLE , ROLE OF DIET AND PHYSICAL ACTIVITY IN PREVENTION OF LIFE STYLE DISEASES

DR ANISH SINGHAL
MEDICAL SPECIALIST
CGHS WING
SAFDARJUNG HOSPITAL
NEW DELHI

DEFINITION OF HEALTH

► According to WHO,

“ a state of complete physical, mental and social well being and not merely the absence of disease and infirmity “

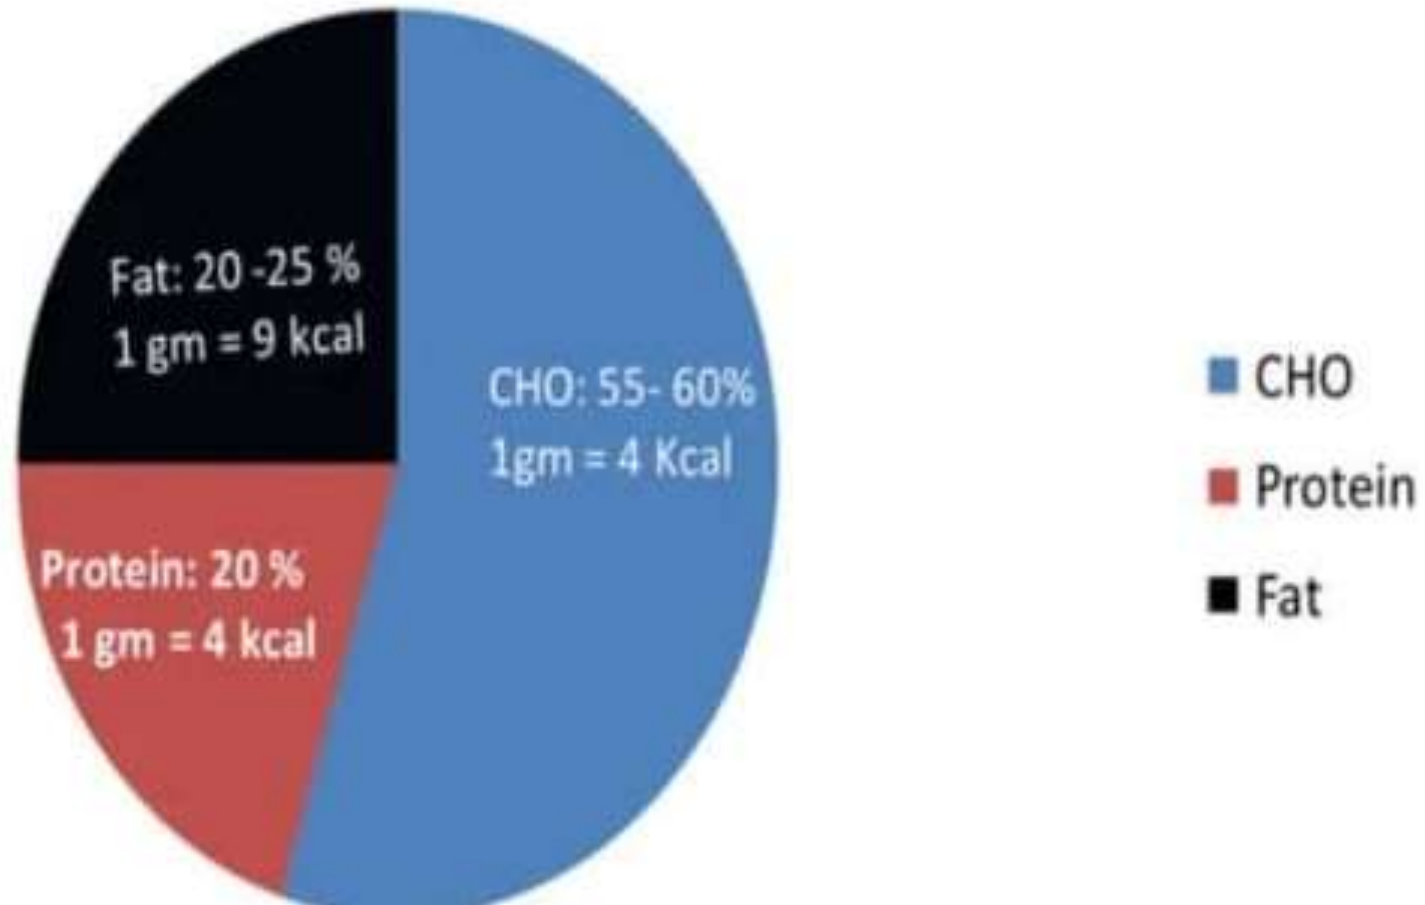

HEALTHY LIFE STYLE

- ▶ A way of living that lowers the risk of being seriously ill or dying early.
- ▶ A way of living that helps you enjoy more aspects of your life
- ▶ It helps YOUR WHOLE FAMILY

KEY ELEMENTS TO LIVE A HEALTHY LIFE STYLE

- ▶ 1) **A Balanced Diet** - A balanced diet is easier and more beneficial than a low-fat or low-carbohydrate diet for most people to maintain
- ▶ 2) Regular Physical Activity
- ▶ 3) Maintaining a Regular Sleep Pattern
- ▶ 4) Stress Management

A Balance diet should provide

Healthy Diet

- Ensure generous consumption of fruits and vegetables and adequate folic acid intake
- Consume cereal products in their whole-grain, high-fiber form
- Limit consumption of sugar and sugar-based beverages.
- Replace saturated and trans fats with unsaturated fats, including sources of omega-3 fatty acids.
- Limit excessive caloric intake from any source.
- Avoid alcohol

A HEALTHY PLATE

HEALTHY EATING TIPS

PLANNING A MEAL

- ▶ Proportions and timings are important-
- ▶ Portions at each meal should be balanced and proportionate
- ▶ Eat at regular intervals

DIETARY HABITS MODIFICATION

- ▶ Chew food well
- ▶ Minimal processing & processed foods. Prefer boiling, roasting, baking, grilling methods
- ▶ Enjoy simple meals
- ▶ Avoid Cold drinks, soda, bakery items etc
- ▶ Keep yourself hydrated
- ▶ Avoid heavy meals at night
- ▶ Do not skip break fast, take early dinner

Small size pop corn – 300 kcal

Gulab jamun (2 nos) – 250 kcal

Samosa (2 nos) – 170 kcal

Dairy milk (42 gm) – 115 kcal

Soft drinks (330 ml) – 150 kcal
vs
milk (2% fat – 100ml)– 50 kcal

Pizza – 242 kcal (1/8 size “12 inch”)

vs

fulka roti (1 no) – 60 kcal

Cheese burger - 461 kcal
vs
banana (1 no) – 100 kcal

French fries (100 gms) – 319 kcal
vs
mix boiled kathol (100 gms) – 100 kcal

EXERCISE

- **Aerobic activity-** Get at least 150 minutes of moderate aerobic activity (brisk walking, dancing, gardening) or 75 minutes of vigorous aerobic activity (running, climbing briskly, fast cycling,fast swimming,playing football,hockey) a week,.
- **Guidelines suggest that you spread out this exercise during the course of a week.**
- **Even small amounts of physical activity for short periods of time throughout the day can add up to provide health benefit.Eg parking car at a distance, Using stairs instead of lift**
- **Strengthening exercise-** Do strength training exercises for all major muscle groups at least two times a week.
- **Aim to do a single set of each exercise using a weight or resistance level heavy enough to tire your muscles after about 12 to 15 repetitions.**

- ▶ The three main components of being physically fit are:
- ▶ **STAMINA, STRENGTH and SUPPLENESS**
- ▶ **STAMINA:** Will help you to have a slower, more powerful heartbeat and you will be able to cope more easily with prolonged or heavy exercise.
- ▶ **STRENGTH:** Will make your muscles toned -up to give you the ability to do physical work. They will work well and you will not experience strains and injuries as often.
- ▶ **SUPPLENESS:** Developing good mobility in your neck, spine and joints will prevent you spraining ligaments and pulling muscles and tendons.

- Have a look at this chart which analyses some Physical Activities and choose which ones are appropriate to your way of life and your needs:

Activity	Stamina	Strength	Suppleness
Climbing stairs	***	**	*
Cycling (hard)	****	***	**
Dancing (folk/ballroom)	*	*	***
Dancing (disco)	***	*	****
Digging (garden)	***	****	**
Football	***	*****	***
Gymnastics	*	***	****
Housework (moderate)	*	*	**
Jogging	****	**	***
Swimming	****	****	****
Walking briskly	**	*	*
Walking (over hills)	***	**	*

Key: *No real effect; ** Beneficial effect; *** Very good effect; ****Excellent effect.

ACTION PLAN

- ▶ If you are not physically active IDENTIFY WHEN you could be more physically active and HOW (e.g. put more physical effort into housework; walk briskly, get off the bus or tram one stop earlier, play sports).
- ▶ **START SLOWLY DON'T** do too much too soon. Listen to your body: if you experience dizziness, nausea, pain and extreme tiredness you are doing too much too soon.
- ▶ If you are comfortable with what you are doing increase the amount of exercise and BUILD IT UP GRADUALLY.
- ▶ AIM at half an hour of MODERATELY INTENSE Physical Activity FIVE or more days a week.

REGULAR SLEEP

- ▶ Set A Sleep Schedule And Stick To It even On Weekends
- ▶ It Helps To Regulate Sleep Cycle And Circadian Rhythm
- ▶ Regular Exercise Promote Muscle Relaxation And Sleep
- ▶ If In Habit Of Nap Then Take It in Early Afternoon
- ▶ It Will Avoid Night Sleep Interference
- ▶ Avoid Drinking Caffeinated Beverages 2-3 Hours Before Bedtime

Continued....

- ▶ **Avoid Heavy Meal or Alcohol Before Bed**
- ▶ **Create Quiet, Calm, Relaxing Environment In Bed Room Like dimming lights and turn off sounds**
- ▶ **Avoid Much of Phone/Television Before Sleep**
- ▶ **Ensure Comfortable Temperature**
- ▶ **Deep Breathing Exercises/Light Yoga Stretches or listening Relaxing Music before Sleep Time**

STRESS MANAGEMENT

- ▶ Simple Breathing Exercises
- ▶ Laugh / Joke among Friends
- ▶ Sit In Quiet Room Away From Unwanted Noise
- ▶ Listen Relaxing Music/Reading Favourite Books
- ▶ Even A Small Walk Around Can Make You Relax
- ▶ Practice Meditation / Prayers / Yoga

Continued...

- ▶ **Take Adequate Rest**
- ▶ **Getting A Massage Is Relaxing**
- ▶ **Make And Follow Realistic Time Schedule**
- ▶ **Spend Quality Time With Family**
- ▶ **Unplug Yourself-Avoid Constant Availability**
- ▶ **Keep alive your hobbies**

LIFE STYLE DISEASE

“A Disease associated with the Way a person or Group of people lives”

LIFESTYLE DISORDERS

- ▶ Obesity
- ▶ Type 2 Diabetes
- ▶ Gastrointestinal Problems
- ▶ Heart Diseases
- ▶ Hypertension
- ▶ Some types of cancer
- ▶ Depression
- ▶ Stroke
- ▶ Metabolic Syndrome
- ▶ Chronic Obstructive Airway Disease
- ▶ Osteoporosis

You are what You eat

- ▶ Healthy eating prevents obesity (major risk factor for diseases like type2 diabetes, stroke, heart diseases, osteoporosis and many more).
- ▶ Diet rich in Calcium can make you prevent osteopenia/osteoporosis
- ▶ Replacing saturated fats with unsaturated can help prevent cardiovascular diseases
- ▶ Healthy Diet improves your mood and make you happier
- ▶ Keeping Salt intake to less than 5 g/day helps to prevent hypertension

Contd...

- ▶ Avoidance of Smoking is a single most important way to prevent vasvular diseases and certain cancers
- ▶ Supplementation of Folic acid during pregnancy can prevent congenital neural tube defects
- ▶ High intake of Fruits and vegetables prevent risk of CAD and stroke
- ▶ Consuming whole grain ,high fiber cereals is associated with low risk of CAD and diabetes and helps in weight control

Table 44.1 Convincing and Probable Relationships between Dietary and Lifestyle Factors and Chronic Diseases

Dietary and lifestyle factors	CVD	Type 2 diabetes	Cancer	Dental disease	Fracture	Cataract	Birth defects	Obesity	Metabolic syndrome	Depression	Sexual dysfunction
Avoid smoking	↓	↓	↓	↓	↓	↓		↑			↓
Pursue physical activity	↓	↓	↓		↓			↓	↓	↓	↓
Avoid overweight	↓	↓	↓		↑	↓			↓		↓
<i>Diet</i>											
Consume healthy types of fats ^a	↓	↓							↓		
Eat plenty of fruits and vegetables	↓		↓		↓	↓	↓	↓			
Replace refined grains with whole grains	↓	↓						↓	↓		
Limit sugar intake ^b	↓	↓		↓				↓	↓		
Limit excessive calories								↓	↓		
Limit sodium intake	↓										

Source: Authors' summary of a review by the WHO and FAO 2003; Bacon and others 2003; Fox 1999; IARC 2002.

Note: **Bold** = convincing; Standard = probable relation; ↑ = increase in risk; ↓ = decrease in risk.

a. Replace trans and saturated fats with mono- and polyunsaturated fats, including a regular source of N-3 fatty acids.

b. Includes limiting sugar-based beverages.

...and mortality from cancers of the colon, breast

Do You Really Think We have a Chance Without Exercise?

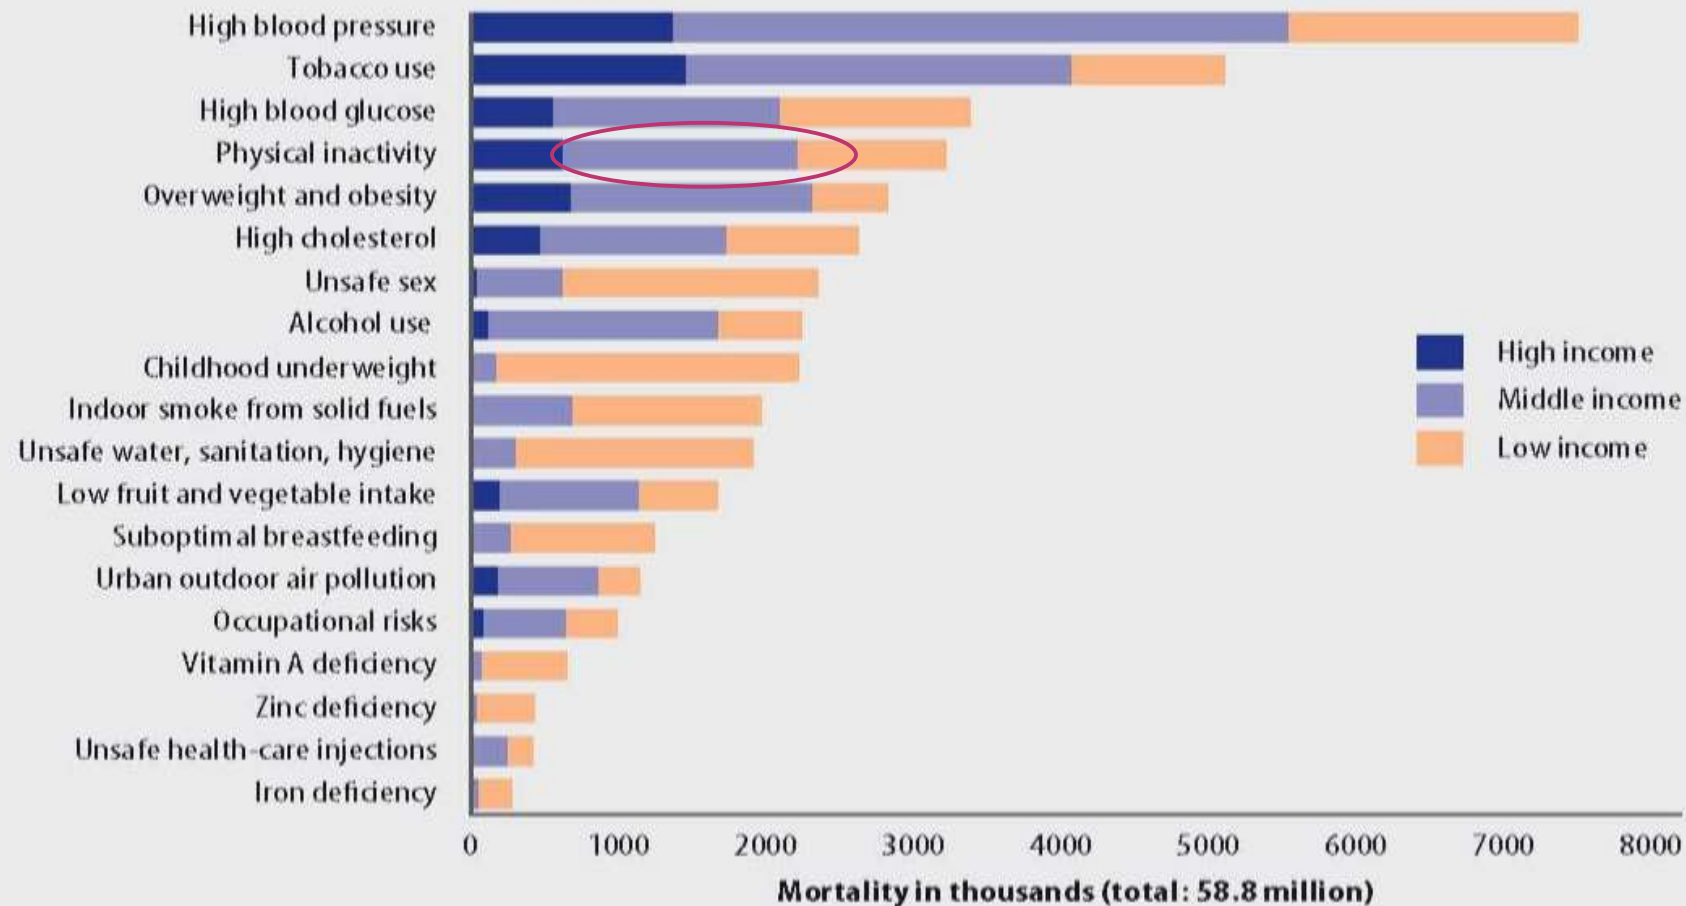

- ▶ Obesity
- ▶ Coronary artery disease
- ▶ Diabetes
- ▶ Hypertension
- ▶ Cancer
- ▶ Depression and anxiety
- ▶ Arthritis
- ▶ Osteoporosis
- ▶ Etc, etc, etc...

NO!

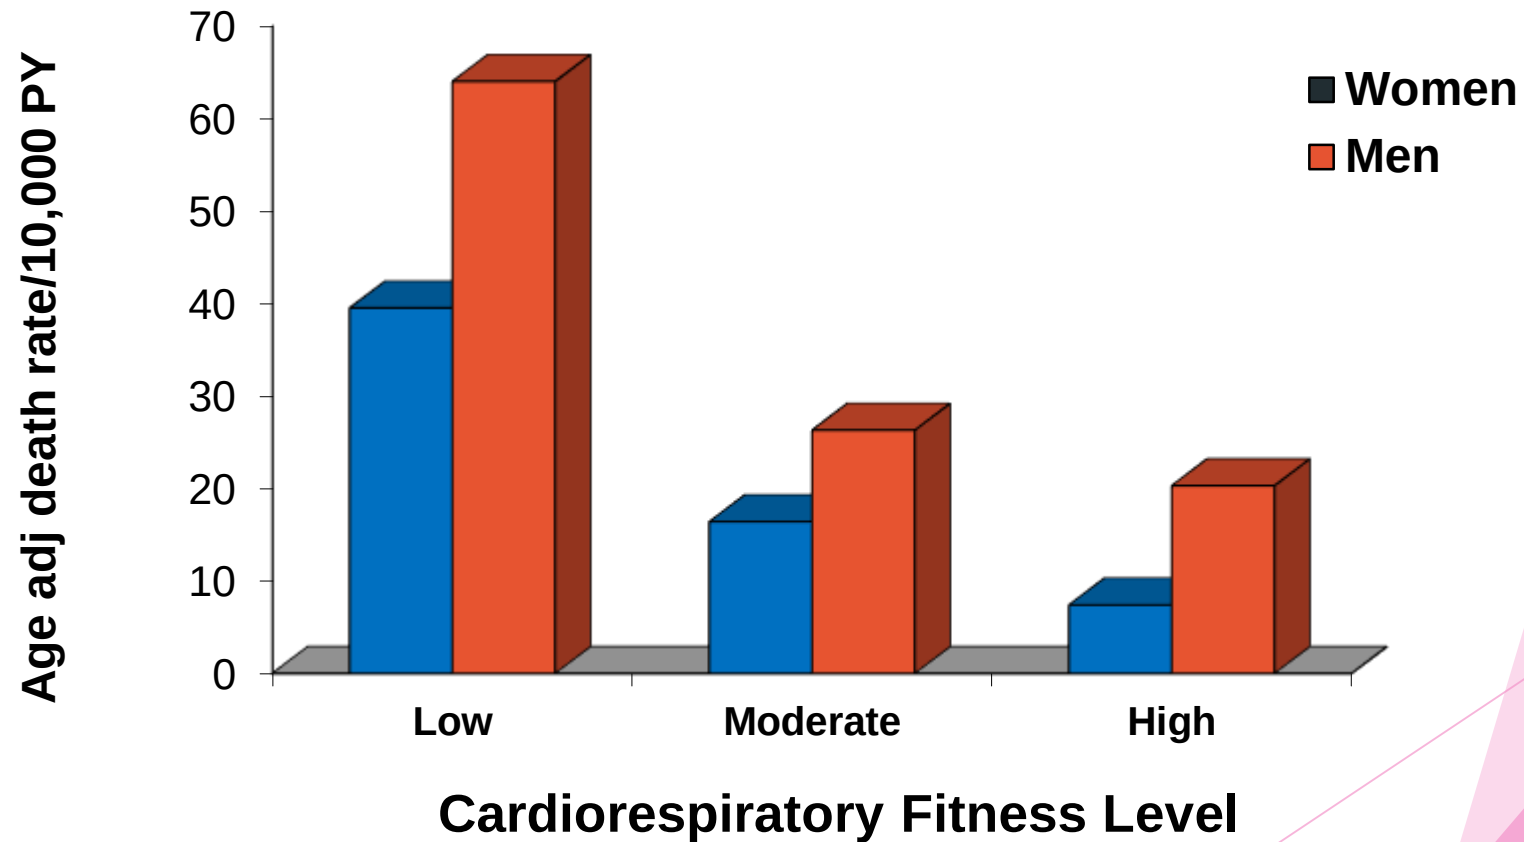

Global Epidemic of Inactivity

Figure 6: Deaths attributed to 19 leading risk factors, by country income level, 2004.

Cardiorespiratory Fitness & Mortality

All-Cause Death Rates by CRF Categories –
3,120 Women and 10,224 Men

Exercise is a Medicine

Physicians should prescribe it, Patients should take it!

Exercise may be the long sought **vaccine**
to prevent chronic disease and extend life

Healthcare

Use the clinician module
(steps 1-3) to promote
physical activity to
patients

1. Physical Activity Assessment

Clinicians and their healthcare team assess physical activity levels during every patient visits.

2. Physical Activity Prescription

Utilization of simple, fast, and effective tools for prescribing physical activity in the right “dose” for the prevention, treatment and management of chronic medical conditions.

3. Referral to a Physical Activity Network

Providing a list of programs, places, and professionals that offer the patient a selection of options that meet their individual needs and personal preferences to fill their physical activity prescription.

How to tame food cravings

- ▶ Variety & portion control
- ▶ Do not skip breakfast
- ▶ Keep your self hydrated
- ▶ Eat plenty of fiber foods like whole fruits, vegetables etc in between meals
- ▶ Reduce stress
- ▶ Avoid fasting and feasting
- ▶ Sugar, caffeine and alcohol are appetite stimulants

Lifestyle message

"IF IT TASTES GOOD, IT'S TRYING TO KILL YOU"

THANK YOU
